

Agile Healthcare Platform

High performance health plans require an agile technology platform providing value-based metrics in real-time.

Healthcare Analytics Have Lacked Insight and Actionability

Healthcare is complex, dynamic and too frequently self-monitored. Tools for risk-holders have been inadequate. Your plan needs expert support. Our Agile Healthcare Platform™ ensures you monitor and benchmark value received and hold your network and members accountable.

What Does It Do For You?

Effective measurement and trending are critical to improvement. The Agile Healthcare Platform supports active decision making by providing focused performance updates from real-time multidimensional data. Robust enterprise risk management features provide opportunities to improve value by highlighting and prioritizing key issues to be acted upon.

Deliver

unparalleled transparency of plan, vendor and member performance

Measure and Monitor

the effectiveness of key decisions and investments

Establish

clear baselines against which to measure continuous improvement

Identify

opportunities to reduce inefficiency and increase value

Provide

access to best-in-class solutions to realize identified opportunities

How Does It Work?

Healthcare is an incredibly complex system and is plagued by waste, inefficiency and abuse. Fortunately, TrendShift analytics generate massive amounts of actionable data that identify and eliminate these performance inhibitors. The key is having continuous access to this data in a way that allows you to act on it.

Our platform accomplishes this by capturing and organizing all available healthcare data into an integrated platform. Our proprietary algorithms, combined with predictive models from Johns Hopkins ACGs, then analyze these data sets for patterns that reveal value trends and measurable opportunity. The output is interpreted and consolidated by our expert staff who then partner with your internal management and consultants to take decisive action and drive continuous value.

Our Platform Is Powerful

When you invest in the TrendShift Platform you are also receiving the dedication of our team of elite professionals with hands-on, real-world experience. Our platform has been proven with numerous customers and billions of dollars in medical transactions. We become your partners. Our incentives and compensation are tied directly to your success. We wouldn't have it any other way.

Key Features and Benefits

Data Capture

Disparate data from across your healthcare enterprise is consolidated and organized in unique storage systems.

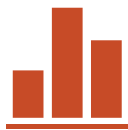

Data Integration

Data is integrated to ensure disparate data sets are readily cross-analyzed. Our proprietary approach enhances our ability to progressively identify unique opportunities to save and create additional value.

Management Dashboards - Empowering Action

Our platform architecture is designed to run our entire package of opportunity analysis algorithms in real-time. Senior executives and benefit managers can create, socialize and collaborate via our real-time performance dashboards. TrendShift analysis and models can provide immediate measurement of historical, current and projected plan metrics.

Agile Data

Our platform is inherently agile and we constantly work to integrate new data sources. When we identify new opportunities in a data set we work diligently to ensure that all of our clients benefit. We also encourage our clients to collaborate with us on new ideas, datasets and integration options.

Agile Management

The cutting edge abilities of our platform bring you the opportunity to manage your health plan in an increasingly successful way. It means that you can make adjustments to your approach many times throughout a plan year, continually driving performance, value and return on investment.

Value Check

Agile Healthcare

Platform Core Analyses

Payment Processing Accuracy

Our platform is able to effectively gauge health plan and payer performance against industry best practices. It continuously analyzes whether claims are being paid according to contract guidelines. It protects you from errors, omissions, waste, fraud and abuse that routinely represent a material percentage of total claims cost.

Pharmacy Benefit Management

PBM efficiency from formulary, plan design, prescribing practices, and ingredient costs is analyzed against best practices. Savings opportunities typically range from 5-15% of total Rx costs.

Care Coordination And Disease Management

Our nurses and physicians ensure that your plan participants receive the best care and prescriptions at the best price.

Network Pricing And Performance

A transparent understanding of network pricing allows companies to accurately gauge where their money is being spent and what value vendors are delivering. In reality, understanding network discounts is not enough. Having insight into what in-network providers are actually being paid is a distinct negotiating advantage when entering into new contracts or enforcing existing agreements. Our clients are typically enlightened and empowered by what our analyses reveal.

Value-Based Care

We are leaders in developing proactive approaches that positively impact the financial and physical health of your members and organization.
